

DOWN THE STRETCH AI

Intelligence at Full Stride

Thoroughbred Racing Intelligence

FEATURE & BENEFIT REFERENCE

What We Do, and Why It Matters

A website copy reference for Down The Stretch AI — benefits to tout, in plain English.

How to use this sheet

Each feature below has a plain-language description and a suggested angle for selling it on the site. Hand this whole document to your AI writing assistant as source material, or pull headlines and bullets straight from it. One rule: the scoring model and the way its odds are built are **proprietary** — tout the *benefit* (“value-adjusted odds”), never describe the method.

The Features

Daily handicapping sheets — one per track

What it is: Every race day the system publishes a clean, one-page-per-race PDF for each track. The model scores every horse, projects fair odds, and explains why it likes or fades each runner.

How to sell it: Lead with simplicity and authority: “The whole card, decoded — one page per race.” Position it as expert analysis that takes seconds to read at the window.

PREVIEW & FINAL editions

What it is: A PREVIEW sheet drops the night before off the morning-line entries; a FINAL sheet publishes on race day reflecting the latest changes. Subscribers get an early look and a race-day-accurate read.

How to sell it: Sell the two-step edge: “Study tonight, confirm at post time.” The FINAL edition is proof the product stays live, not static.

Live scratches applied

What it is: When a horse is scratched, it's removed and the field is re-evaluated for the FINAL sheet — the analysis reflects who's actually running, not who was entered.

How to sell it: Tout accuracy and freshness: “No dead weight — scratched horses are gone, and the read is recalculated around the real field.”

Jockey changes captured

What it is: Late rider swaps are picked up before the FINAL sheet, and the jockey signal updates with them. A hot rider getting a leg up is reflected in the numbers.

How to sell it: Emphasize that details matter: “The rider changed — so did our read.” Great proof point for the ‘refined, not lazy’ positioning.

Track & surface condition updates

What it is: Sheets carry the track condition (Fast, Good, Sloppy, Firm, Yielding) and surface, and the model accounts for the going as weather shifts it through the day.

How to sell it: Speak to the seasoned bettor: “Mud or firm turf, the model adjusts. The going changes the game — we keep up.”

Value-adjusted odds vs the Morning Line

What it is: Every horse gets the model’s own fair price alongside the track Morning Line. The gap between the two is where value lives — flagged as overlays (bet), chalk (agree), or fades (toss).

How to sell it: This is the headline benefit: “We don’t just pick winners — we price them.” Sell the edge of value, not just opinion. (Keep the method proprietary — never describe how the odds are built.)

Top DTS Bets

What it is: Each card surfaces up to three highest-conviction plays, ranked by the model’s edge over the Morning Line, and they drop off the list once their race goes off.

How to sell it: Perfect for a ‘get the shortlist’ hook: “Short on time? Three best plays, ranked, every card.”

Why-Like / Why-Fade reasoning

What it is: Each highlighted horse shows up to three positive signals and three negatives — class moves, jockey switches, pace fit, pedigree, layoffs — ranked by impact. The model shows its work.

How to sell it: Sell transparency and trust: “Every call comes with its reasons. No black box at the window.”

Comparable strength bars

What it is: Speed, jockey, and trainer each get a bar on a fixed scale, so a rating in Race 1 means the same thing in Race 8 — you can read strength across the entire card at a glance.

How to sell it: Great for the ‘fast to scan’ angle: “Strength you can compare across every race, not just within one.”

Heritage meets machine intelligence

What it is: Down The Stretch is the modern evolution of Be The Smart Money (est. 2009) — seventeen years of racing know-how fused with a machine-learning scoring model.

How to sell it: Anchor the premium positioning: “Seventeen years at the rail, now powered by AI.” Tradition + technology is the core brand story.

Built for the whole racing world

What it is: Four audiences — owners, trainers and agents, bettors, and fans — each get value from the same trusted read, on and off the track.

How to sell it: Use audience-specific sub-headlines so each visitor sees themselves: sharper decisions for owners, an edge for bettors, a richer watch for fans.

Ready-Made Taglines

“Intelligence at Full Stride.”

“We don’t just pick winners — we price them.”

“The whole card, decoded — one page per race.”

“Seventeen years at the rail, now powered by AI.”

“Study tonight. Confirm at post time.”

“Every call comes with its reasons.”

Voice & Guardrails

Tone: premium, refined, turf-club — trustworthy racing heritage fused with modern machine intelligence. Confident, not loud. Think prestige, not neon sportsbook.

Words that fit: intelligence, edge, value, fair price, heritage, refined, decoded, conviction, the rail, post time.

Avoid: “guaranteed,” “sure thing,” hype, gambling-promo clichés, and anything that promises winnings.

Compliance footer to keep on the site: DTS publishes model output for informational purposes. Past performance does not guarantee future results. Wager responsibly.
