

HOW TO READ YOUR DTS CARD

downthestretch.ai · a quick guide to every element on the page

Each daily PDF is one page per race. The model scores every horse, projects fair odds, and explains **why** it likes or fades each runner. Below is what the elements on the page mean and how to use them at the window.

THE PAGE HEADER

- **Track + Date** sit top-left. The center band shows **1st Post** (local time) above the track **Dirt / Turf condition** ("Fast / Firm" until weather changes it).
- The right side of the header is the **TOP DTS BETS** card — see right column.

THE RACE HEADER

- **Race N** on the left. The line below lists any **multi-race wagers** offered out of this race (Pick 3, Pick 4, etc.).
- Middle slot summarizes the **race conditions** in shorthand (e.g. "3YO+ · F&M · NW 1X since").
- Right slot is **surface · distance · purse**.

THE HORSE ROW

Reading left to right:

#	Program number (couplings keep the letter — 1A, 1B).
Horse	Bold name. Italic line below shows jockey / trainer .
ODDS	The model's fair odds for this horse in traditional racing form (5/2, 7/1, ...).
P(Win)	The model's win probability , expressed as a percent.
RUNS	Projected running style: Early , Late , or — if unclear.
SPD JKY TRN	Three colored bars — speed, jockey, trainer (explained below).
Comments	Two short sentences. First sentence: what the model likes / dislikes . Second sentence: value vs the Morning Line .

THE THREE BARS

The bars use **fixed scales** so a SPD bar in Race 1 means the same thing as a SPD bar in Race 8 — you can compare across the whole card, not just within a single field.

	SPD	Speed — engineered BRIS Prime Power Rating. Higher = faster horse on the model's scale.
	JKY	Jockey — standardized current-meet win rate. Hot riders score high; long-shot pilots score low.
	TRN	Trainer — standardized current-meet win rate. Same idea, for the conditioner.

Missing data lands mid-bar (a "no signal" read), not at zero.

TOP DTS BETS CARD

Up to three plays per card, ranked by the model's edge over the Morning Line. Each line reads:

TOP DTS BETS		
R3 #5	ABBI FEDE (ML 5/2)	Even Money
R5 #2	SILK TIES (ML 6/1)	3:1

- **(ML X)** — the track's Morning Line for that horse.
- **Right-hand value** — the DTS fair odds: **"Even Money"**, **"N:1"**, or **"X:Y"**.
- The bigger the gap between ML and DTS, the more value the model sees. A horse listed at ML 6/1 with DTS 3:1 is roughly a **2× overlay**.
- Bets **disappear from the card** after their race goes off, so the list always shows what's still ahead.

WHY LIKE / WHY FADE

Each horse gets up to three reasons on each side:

-  **Green checks** — the strongest positive signals the model found (class drop, jockey switch, pace match, pedigree edge, etc.).
-  **Red X's** — the strongest negative signals (class rise, layoff, surface switch off form, speed regression, etc.).
- Signals are **ranked by impact**: the top reason moved the model's odds more than the second, which moved it more than the third.
- A horse can have checks **and** X's — the model is showing you the trade-offs, not a verdict.

READING THE VALUE

The Morning Line is the track handicapper's guess at where the public will bet. The DTS odds are the model's **fair price**. Comparing the two is where the edge lives.

CHALK PLAY	Heavy favorite (low ML) the model agrees with — bet on top in exotics, single in a Pick.
OVERLAY	ML longer than DTS by a wide margin — pure-value win bet, key in exactas/trifectas.
FADE	DTS odds longer than ML — public is overbetting; toss or use underneath only.

QUICK GLOSSARY

ML	Morning Line — track handicapper's projected odds at entry time.
DTS / ODDS	The model's fair odds for the horse.
P(Win)	Win probability the model assigns to the horse.
NW 1X / 2X	Non-winners of one (or two) races of a given type other than maiden/claiming/starter.
Mdn SpWt	Maiden Special Weight — non-claiming maiden race.
Str Opt Clm	Starter Optional Claiming — entered horses can optionally be claimed.
